ANNUAL REPORT

OF THE

COMMISSIONER OF PATENTS

FOR

THE YEAR 1870

U.S. Patent office

VOLUME I.

WASHINGTON:
GOVERNMENT PRINTING OFFICE.
1871.

LETTER.

DEPARTMENT OF THE INTERIOR, PATENT OFFICE,
Washington, D. C., January 31, 1871.

SIR: I have the honor to transmit herewith the annual report of the Commissioner of Patents, as required by section 9 of the act of Congress, approved July 8, 1870, entitled "An act to revise, consolidate, and amend the statutes relating to patents and copyrights."

Very respectfully, your obedient servant,

SAM'L A. DUNCAN,
Acting Commissioner.

The SPEAKER *of the House of Representatives.*

REPORT.

UNITED STATES PATENT OFFICE,
January 31, 1871.

To the Senate and House of Representatives of the United States of America in Congress assembled:

By the 9th section of the act of Congress approved July 8, 1870, entitled "An act to revise, consolidate, and amend the statutes relating to patents and copyrights," the Commissioner of Patents is required to lay before Congress, annually, in the month of January, a report "giving a detailed statement of all moneys received for patents, for copies of records or drawings, or from any other source whatever; a detailed statement of all expenditures for contingent and miscellaneous expenses; a list of all patents which were granted during the preceding year, designating under proper heads the subjects of such patents; an alphabetical list of the patentees, with their places of residence; a list of all patents which have been extended during the year; and such other information of the condition of the Patent Office as may be useful to Congress or the public."

In compliance with this requirement of the statute, I have the honor to submit the following report:

The receipts and expenditures of the office for the year ending December 31, 1870, and the condition of the balance in the Treasury on account of the patent fund, as well as the character and extent of the business done by the office during the year, are shown in the following statements:

No. 1.—*Statement of moneys received.*

Amount received on applications for patents, reissues, extensions, caveats, disclaimers, appeals and trade-marks	$603,775 00
Amount received for copies of specifications, drawings, and other papers	46,559 70
Amount received for recording assignments	19,122 06
Total	669,456 76

No. 2.—*Statement of moneys expended.*

Amount paid for salaries		$404,143 53

A subject-matter index of the patents issued during the year 1870, an alphebetical list of the patentees with their places of residence, and a list of the patents extended during the year, have been prepared and are submitted herewith as a part of this report.

Called upon to perform the duties of Commissioner of Patents temporarily only, until the gentleman already appointed to fill the vacancy occasioned by the resignation of the late Commissioner shall assume the office, it would manifestly be improper that I should embrace the present opportunity to recommend measures the advisability of which can in any respect be called in question. I shall refrain, therefore, from any general discussion of the affairs of the Patent Office, and confine myself to two or three matters which demand early attention and about which it would seem that there can be but little difference of opinion.

By the joint resolution providing for publishing the specifications and drawings of the Patent Office, approved January 11, 1871, it is provided that the publication of the abstracts of specifications and of

the engravings heretofore accompanying the annual report of the Commissioner of Patents shall be discontinued after the middle of the year eighteen hundred and sixty-nine, the mechanical illustrations for the first six months of that year having been already prepared; and that in lieu thereof the Commissioner is authorized to have printed for gratuitous distribution one hundred and fifty copies of the complete specifications and drawings of each patent thereafter issued, which copies, duly certified under the hand of the Commissioner and the seal of the Patent Office, are to be placed for free public inspection in the various State and territorial capitals and in the clerk's offices of the district courts of the various judicial districts throughout the United States; and this officer is further authorized and directed to have printed such additional numbers of copies of specifications and drawings, certified as before provided, as may be warranted by the actual demand for the same, to be sold at a price not exceeding the contract price for such drawings. It is also provided that the copies of drawings shall be made upon contract after due advertisement by the Superintendent of Public Printing, under the direction of the Joint Committee on Printing.

This discontinuance of the publication of the mechanical report is in conformity with the recommendation of the late Commissioner of Patents. I have always doubted somewhat the wisdom of such a step, knowing, as I do, the avidity with which inventors in all parts of the country seek for copies of the report; and believing, also, that the matter contained therein, though necessarily imperfect, is, nevertheless, full of suggestions, and peculiarly calculated to furnish food for the inventive mind.

The delay heretofore connected with the publication of that report could have been entirely obviated by promptness in making the necessary appropriations for the work, as by proper management the Office could easily have had all the matter ready for press within one month after the end of the year. If it was found that the report under the system of distribution heretofore adopted failed to reach the quarters where it would confer the most benefit, this evil could easily have been remedied by providing, among other things, that each patentee of a given year should receive as a gratuity one copy of the report for that year, and that the rest of the edition be sold at a price not exceeding the prime cost thereof. And as to the printed copies to be hereafter placed at central points, as provided by the joint resolution, it is feared that they will be of comparatively little service to the great mass of inventors who are scattered widely through the sparsely settled portions of the country, and who practically will have but little opportunity of consulting them. As evidence in the courts, as aids to patent solicitors and to professional experts, upon whom inventors largely rely, and as sources of information to all persons living near the places of deposit, they will of course prove valuable, as furnishing more exact

and reliable knowledge than can be gained from any other source. For this reason they would form a most valuable adjunct to the present report; and in view of the great benefits which the patent system has already conferred upon the nation—single inventions, like the sewing machine, the harvester, the telegraph, or vulcanized rubber, having more enriched the country than the whole system has cost from its inauguration to the present time—I believe that the expense of retaining the mechanical report in addition to the new publication would be fully justified. The annual income of the Patent Office, in excess of its expenditures, would more than pay the cost of the proposed additional work; and the balance of six hundred and forty thousand dollars in the Treasury to the credit of the patent fund warrants the most liberal policy in support of the workings of this bureau. The Government ought not to seek to raise revenue by levying taxes upon the inventive genius of the people; but all the money received from inventors should be expended in such a way as to secure the largest and most beneficent development of the patent system.

But, whatever question may be made as to the policy of retaining or dispensing with the mechanical report, if we inquire as to the mode in which the drawings should be reproduced in carrying out the provisions of the recent enactment, I am convinced from a careful consideration of the subject that the work should be done by the Patent Office itself and not by contract. The objections to dealing with contractors are manifold. Not the least among them is the fact that the office is required to part temporarily with the custody of its original records, a thing which, for obvious reasons, should never take place, and which at times becomes the source of great inconvenience in the transaction of business. With a proper outfit the work could undoubtedly be done in the office as artistically and more economically than by outside parties. Under this arrangement, too, the copies prepared for gratuitous distribution could be made to conform in size to those which are now being made for office use, and thus a saving of many thousands of dollars be effected annually. If under the contract system a smaller size be adopted, it would necessitate a recomposition of the entire letter-press at an annual expense of not less than sixty thousand dollars, against which there would appear as elements of saving, from the reduced cost of paper and binding, not more than thirty thousand dollars. I deem it of importance, as a matter of economy as well as convenience, that the same size be adopted for the public as for the Office.

I would respectfully suggest, therefore, that in any appropriation which may be made for carrying out the provisions of the joint resolution, it shall be provided that if, in the judgment of the Secretary of the Interior, the work can be performed more advantageously under the direction of the Commissioner of Patents than in the manner proposed by the resolution, it shall be so done. This, without deciding the ques-

tion of relative economy in advance, would give the head of the Department opportunity to investigate the whole subject thoroughly before the course to be adopted should finally be decided upon.

As regards the sale of single copies of the specification and its accompanying drawing, the price established by the joint resolution is unnecessarily and unreasonably low. "The contract price of the drawing" could hardly be expected to exceed three cents; yet the cost of the drawing and the corresponding specification, together with the handling and certifying of the same, could not be much less than ten cents. As certified copies are mainly needed for proceedings in courts and in settling questions of title, I would suggest that the price of the same be left as now fixed by the patent law, and that the price of uncertified printed copies be left to the determination of the Commissioner, ten cents being fixed as the minimum and fifty cents as the maximum. This would be such a reduction from the prices now charged as would doubtless create a largely increased demand, and give no occasion for complaint; at the same time it might reasonably be expected to add considerably to the revenues of the Office from this source.

By section 20 of the patent act approved July 8, 1870, the Commissioner of Patents is authorized to print, or cause to be printed, copies of the claims of current issues of patents, and copies of such laws, decisions, rules, regulations, and circulars as may be necessary for the information of the public. Under this provision of law the Office has, for some time past, been issuing a weekly list of patents, which contains the number, title and claim of each patent issued, together with the name and residence of the patentee. This publication costs the Government about five thousand dollars per annum. It is sold to subscribers at five dollars a year; and the amount realized from this source during the last year is thirty-three hundred and sixty-eight dollars. The amount paid for advertising applications for the extension of patents, during the same time, is twenty-nine hundred and twenty-three dollars.

I would respectfully recommend that the Commissioner of Patents be authorized to enlarge the scope of the periodical publication named, so as to make it an official gazette, in which all the advertisements pertaining to the business of the Office shall be inserted, in lieu of all other advertising as now required by law. At present, the law requires that the Commissioner shall publish a notice of every extension application in one newspaper in the city of Washington, and in such other papers published in the section most interested adversely to the extension of the patent, as he may deem proper. Under this law, the patronage of the Office is distributed among three of the Washington papers, and a second copy of the advertisement is usually sent to some paper in the vicinity of the residence of the patentee. This is at best an imperfect system of accomplishing the work intended, as there is no one paper in the entire country which contains all the advertisements of the Office,

and which therefore a person concerned, professionally or otherwise, in extension applications, can take, and feel assurance that the very case for which he is watching may not escape his eye. By the proposed change in this regard all uncertainty of this kind would disappear; the public, both inventors and attorneys, would be much better served, since in connection with the list of claims they would receive the official advertisements without further expense; and a considerable saving to the Government would be effected, both by the cessation of further payments for advertising and by the largely increased circulation which by this means would be secured for the publication already authorized by law.

By section 63 of the patent act it is provided that an application for the extension of a patent shall be filed "not more than six months nor less than ninety days before the expiration of the original term of the patent." Under this section applications are generally delayed until the last moment; and then it frequently happens, if the case is an important one, in which opposition is entered, and the taking of a large amount of testimony, to be obtained in remote and widely separated sections of the country, becomes necessary, that the application cannot be prepared for hearing until so late a day as to cause the careful consideration of it prior to the expiration of the patent seriously to interfere with the Commissioner's duties in relation to other matters. It frequently happens, too, that on the day of hearing a fatal defect in the presentation of the case is developed, which, if there were further time at the disposal of the party, might be remedied. For these reasons every such case, in my judgment, should be brought to a hearing at least four weeks before the date of the expiration of the patent. To this end the application must be filed in the Office at an earlier day than is now required by law. I would suggest that nine months be fixed as the maximum limit, and six as the minimum.

The business of the Patent Office for the past year is perhaps sufficiently exhibited by the tables already given, and does not call for any extended remark. I cannot, however, close this brief report without referring to the eminent service rendered by the late Commissioner, the Hon. Samuel S. Fisher, whose energy and ability in the discharge of his official duties have done so much to correct and systematize the practice of the Office. The periodical publication of the Commissioner's decisions, whereby the examiners, as well as attorneys, have received early information of the principles which controlled the head of the Office in deciding the cases brought to his personal attention, has proved a marked and most valuable feature of the late administration. Great care was also exercised in the filling of vacancies, the appointments being made with special reference to the merits of the persons receiving them, and in many instances after they had passed the ordeal of a severe competitive examination.

The manifest improvement thus effected in the *personnel* of the Office

reflects credit upon the officer under whose administration it was brought about. The impress which he has left behind him will be lasting, and his official connection with the patent system will long be remembered with satisfaction and pleasure.

Respectfully submitted.

SAM'L A. DUNCAN,
Acting Commissioner.

16,254	Wright, Wendell, Bloomfield, N. J. Mode of securing springs in upholstery	Dec. 16, 1856
14,333	Wyche, William E., Brookville, N. C. Cultivating-plow	Feb. 26, 1856

ALPHABETICAL LIST OF INVENTIONS.

Invention or discovery.	Name of patentee.	No.
A.		
Abdominal and back supporter and truss, Combined	R. J. Cundiff	103, 992
Abutment for bridges, Metallic	A. Wheelock	99, 989
Accordeon	C. F. Zimmerman	106, 018
Acetic acid, Process of obtaining from wood	T. Schwartz	101, 319
Acetic acid, Purifying	T. L. Olden	100, 553
Acid, citric, Manufacture of	W. R. Johnston	103, 340
Acid, residuum from oil-refineries, Process of treating	A. Farrar	100, 876
Acid, sulphurous, Apparatus for producing	M. Hatschek	101, 011
Adding and subtracting register	H. A. House	109, 619
Adding-machine	E. A. Swain	98, 720
Adding-machine	H. Parmelee	99, 226
Adding-machine	G. W. Chapin	99, 533
Adding-machine	J. Groesbeck	100, 288
Adding-machine	N. Ockerlund	105, 717
Adding-machine	F. T. Leilich	106, 701
Adding-machine	C. E. Spear	106, 881
Adding-machine	G. W. Chapin	106, 999
Adding-machine	F. F. Warner	110, 520
Addressing-machine	J. McFatrick	108, 038
Adjustable attachment of pump-barrels to their bases	J. W. Douglas	98, 674
Adjustable bearings for water-wheel shafts	W. Bayley	101, 083
Adjusting-slide for chains	R. J. Pond	101, 503
Adjustment of mercurial pressure-gauge	M. E. Campfield	102, 464
Adjustment of wheels on the axles of railway-cars	R. Eaton	99, 418
Advertising-apparatus	W. Hebdon	109, 308
Advertising-frame, Extensible	D. G. Howell	99, 675
Ads, Stone	W. Covart	107, 227
Ageing spirits	A. Caldwell	107, 658
Ageing whisky and other spirits, Apparatus for	J. P. Greely	109, 611
Air and gas, Apparatus for carbureting	J. B. Hyde	107, 269
Air and gas, Apparatus for carbureting	H. A. Chapin	108, 005
Air and gases, Apparatus for carbureting	A. Bartholf	108, 439
Air and gases in fat-rendering, bone-boiling, &c., Deodorising the	A. and E. Lister and C. J. Eames	109, 638
Air and liquids, Cooling	D. E. Somes	101, 392
Air, Apparatus for carbureting	J. H. Van Houten	109, 562
Air, Apparatus for carbureting	J. D. Spang	109, 148
Air, Apparatus for carbureting	J. F. Spence and L. D. Towsley	99, 274
Air, Apparatus for carbureting	R. H. Plass	104, 642
Air, Apparatus for carbureting	A. E. Dupas and A. Barbarin	104, 716
Air, Apparatus for carbureting	J. F. Spence	105, 994
Air, Apparatus for carbureting	H. Oertel	107, 403
Air, Apparatus for supplying	H. W. Adams	110, 414
Air, Carbureting	C. Lawrence	100, 534
Air-compressing apparatus	B. T Babbitt	103, 121
Air-compressing apparatus, Hydraulic	M. Hey	102, 307
Air-compressing apparatus, Hydraulic	W. D. Seal	104, 302
Air-heater and steam-condenser, Compound	B. F. Sturtevant	100, 240
Air-heater and steam-condenser, Compound	B. F. Sturtevant	100, 241
Air-heater and steam-condenser, Compound	B. F. Sturtevant	100, 242
Air, Machine for cooling, and for manufacture of ice	J. Kraffert	110, 573
Air-pistol	R. Brooks, jr	99, 754
Air-pump	J. W. Hopkins	99, 193
Air-pump	J. F. Haskins	109, 732
Air-wheel for gas-carburoters, Rotary	J. F. Spence	107, 635
Alarm-attachment	J. H. Thorp	109, 971
Alarm-attachment for clocks	J. H. Davis	110, 016
Alarm-attachment for locks and bolts	C. E. Pierce	104, 195
Alarm, Burglar	H. Green	98, 489
Alarm, Burglar	R. Shaler	100, 933
Alarm, Burglar	W. Reynolds	105, 309
Alarm, Burglar	E. T. Clegg	109, 588
Alarm, Burglar	J. H. Thorp	109, 970
Alarm, Burglar	M. J. Hunt	110, 043
Alarm, burglar, Electro-magnetic	W. B. Guernsey	108, 257
Alarm, burglar, Electro-magnetic	J. M. Dille	109, 723
Alarm, Electro-magnetic	T. S. Hall	105, 447
Alarm for safes	W. Spear	104, 073
Alarm for steam-boiler, low-water, Electro-magnetic	W. Duryea	106, 141
Alarm-gong, Electro-magnetic	C. Williams, jr., and J. Redding	108, 743
Alarm-gun	C. J. Beasley	100, 106
Alarm, High and low water	G. N. Jones	105, 461
Alarm, Hotel and burglar	C. S. Nee	100, 792
Alarm-lock for money-drawer	G. Kimball	108, 363
Alarm, Low-water and high-pressure	G. B. Massey	106, 596

Albumen, Manufacture of	G. Bourgade	106, 112
Albumen, Preparation of	J. E. Tapley	106, 238
Album, Photographic	J. B. Mason	103, 064
Alcohol and other liquids, Cold cap-still for the distillation of.	C. C. Parsons	104, 343
Alcohol and spirits, Purifying	C. L. Fleischman	103, 320
Alcoholic liquors, Apparatus for rectifying	C. L. Fleischman	106, 530
Alcoholic liquors, Apparatus for rectifying	J. Ellingwood	108, 773
Alcoholic liquors from grain, Fermenting	D. Werthen	107, 645
Alcoholic spirits, Rectifying and improving	J. Werner	99, 124
Ale and beer casks, Composition for lining	M. Reynolds	102, 041
Ale and beer, Cooling	F. Zeits	103, 955
Ale, beer, &c., Apparatus for cooling	W. H. Balmain	102, 907
Alkali, caustic, Packing	C. Robinson	107, 545
Alley-board for ball-game	L. Sibert	100, 937
Alloy, Metallic, to imitate the precious metals	E. Savage	102, 324
Alloys of manganese, Manufacture of	H. Colby	100, 119
Altitude-instrument	N. Heintzelman	103, 570
Alto-relievo figures, Process for making molds for casting of.	P. Spence	110, 084
Alum and fertilizers from mineral phosphates, Manufacture of.	J. C. Brewster	99, 630
Amalgamator	C. W. Stevenson	102, 177
Amalgamator	J. Scott	103, 377
Amalgamator and ore-concentrator	L. A. Plumb	104, 879
Amalgam for filling teeth, Composition	G. C. Pattison	102, 583
Anchor	G. C. Pattison	102, 584
Anchor	A. H. Law	103, 205
Anchor	W. W. Goodrich	100, 405
Anchor-beam support for brick walls	Z. Ellis	98, 676
Anchor for securing cores in molds	R. Pinkney	106, 616
Aniline, Production of colors for dyes, inks, &c., from	H. A. Stearns	103, 519
Animal and vegetable substances, Apparatus for extracting oil from.	J. Stuart	107, 833
Animal fibers from vegetable, Separating	B. T. Smith, J. K. Priest, and W. Earl	104, 223
Animal-shearing machine	O. Barker	100, 967
Animals, Instrument for dosing	S. H. Shaw	102, 874
Animals, Stall for feeding	J. W. Upson	104, 667
Animal-tether	J. Capron	110, 547
Annunciator	W. N. McInnis	101, 372
Annunciator, Electro-magnetic	J. G. Hanning	103, 325
Anti-freezing device for pumps	T. Chase	105, 426
Anti-friction gearing	J. S. Howard	100, 038
Antimony, Electrotyping with	D. Bainbridge	108, 231
Anvil-last	A. K. Howe	108, 788
Apparatus for drying and pressing lard-scraps	S. M. Moschcowitz	99, 752
Apparatus for frizzling cloth	R. J. Dodd	101, 838
Apple corer and slicer	B. J. McFeely	107, 794
Apple corer and quarterer	J. Shobe	109, 350
Apple parer, corer, and slicer	G. W. Bennett	103, 224
Apple parer, cutter, and corer	W. Robb, 2d	109, 454
Apple-paring machine	M. P. Smith	109, 068
Apples, Drying and preserving	G. B. Hamlin	106, 350
Apples for the manufacture of cider, Machine for preparing.	S. H. Cole	106, 330
Approach gate	D. Hammond and J. Abbott	102, 393
Arch girders, Tubular	J. B. Fuller	105, 785
Argand gas-burner	W. B. Curtiss	103, 993
Argand lamp-burner, Wick-adjuster for	G. K. Osborn	104, 635
Argand oil-burner	F. Coignet	99, 637
Argillaceous limestones, Treating, to obtain hydraulic cement.	H. Hendrickson	107, 402
Arms for working slide-valves, Adjustable	L. Buchberger	109, 582
Arm-support for keyed instruments	C. M. T. Du Molay	103, 433
Arsenic sulphurets, Process of extracting silver and gold from.	S. P. Wheeler	101, 532
Articles of compressed wood, Manufacture of	C. A. Moore	109, 646
Articles of glass, Manufacture of	G. F. Shaffer	99, 593
Articulator, Dental	W. Boulton	105, 633
Ashlars, Cutting

Fork and band-cutter, Combined	M. Wenger	106, 758
Fork, Barley or gavel	B. P. Sharp	102, 598
Fork for peach-parer	D. H. Goodell	102, 934
Fork, Grain	W. S. Bryan	106, 656
Fork, Hay	L. Rogers	98, 711
Fork, Hay and manure	R. A. Peet	104, 993
Forks, Machine for bending	I. G. Batcheller	106, 709
Fork, Table	J. Patterson	99, 341
Fork, Toasting	H. H. Taylor and G. H. Graham	99, 971
Former for hoop-skirts	C. C. Wilson	102, 638
Forming blown glass-ware, Mode of	H. Dillaway	100, 127
Forming T-bolts, Method of	J. Deeble	98, 931
Forming umbrella-handles from plastic material, Mode of.	L. Chapman	107, 000
Foundation for buildings	A. F. Cooper	100, 962
Foundery flask-clamp	C. C. Stewart	102, 987
Fountain	A. P. Yates	103, 814
Fountain brush-holder	W. A. Shepard	105, 135
Fountain, Self-feeding	E. Amende	104, 921
Fowls, Medical compound for	J. H. Kipp	108, 603
Frame for dyeing in various colors for the manufacture of Scotch plaids, &c.	C. Barton	99, 750
Frame for passe-partout	P. Mignot	102, 296
Frame for potato-diggers and shovel-plows	J. M. Dick	105, 922
Frame for sensitizing photographic paper	L. V. Moulton	105, 833
Frame for street-lamps, &c	J. Radston	103, 239
Frame of safe-case for papers	S. H. Harris	107, 043
French bedstead	R. C. Dubois	102, 098
Friction calendar-rolls for paper	W. H. Soley and G. Stites	101, 539
Friction-clutch	S. Ingersoll	99, 199
Friction-clutch	F. A. Pratt	100, 064
Friction-clutch	O. Lull	103, 634
Friction-clutch	T. Coldwell	109, 299
Friction-clutch	W. W. Jerome, S. B. Alger, and C. H. Sage.	109, 740
Friction-clutch for engaging and disengaging gearing	G. D. Emerson	104, 846
Friction-clutch mechanism	M. G. Crane and A. M. Polsey	99, 761
Friction-locomotive	T. S. Minnis	107, 709
Friction-match lighter, Manufacture of	W. Porter	107, 810
Friction-matches, Composition for the manufacture of	J. J. Karlen	101, 625
Friction-pulley	E. F. Allen	108, 749
Friction-roller	W. Brown	109, 866
Friction-roller bearing	C. M. Daboll	102, 779
Friction-roller for railway-car trucks	J. Pencille	107, 955
Friction-roll for yard-arms	F. Thoits	100, 468
Friction-wheels for gearing	W. D. Andrews	100, 830
Frosted plush-paper, Manufacture of	H. V. Edmond	103, 990
Fruit and vegetable parer	H. Boggs	110, 167
Fruit and vegetable slicer	W. A. Mayhew	107, 516
Fruit and vegetables, Machine for paring	A. G. Batcheldor	103, 830
Fruit, Apparatus for preserving	W. W. Lyman	102, 951
Fruit-basket	G. H. White	109, 983
Fruit-basket, Paper	A. Adams and J. F. Jewett	105, 619
Fruit-baskets, Cutter for cutting the bodies of	B. D. Whitney	103, 533
Fruit-baskets, Machine for bottoming	B. D. Whitney	103, 532
Fruit-cans and other cylindrical packages, Machine for varnishing and labeling.	A. C. Platt	106, 794
Fruit-cans, Machine for making	I. Kling	100, 775

Furnace and range combined	E. Edward	107, 347
Furnace and tea-kettle, Combined	C. L. Taylor and G. C. Sotchell	108, 889
Furnace, blast, Apparatus for	R. A. Smith	109, 356
Furnace, Coke	T. Price	100, 940
Furnace for burning edgings, saw-dust, &c	I. O. Smith	99, 793
Furnace for burning shavings	L. Crandall	110, 118
Furnace for deoxidizing iron ore	A. W. Housinger	98, 496
Furnace for deoxidizing iron ore	A. H. Brainerd	109, 173
Furnace for drying sand	I. D. Johnson and A. Hartwell	100, 636
Furnace for melting and refining iron, &c	A. F. Du Faur	99, 415
Furnace for producing "sponge" from iron ore	G. Nock	103, 489
Furnace for re-burning bone-black and reducing ores	A. Weber	105, 747
Furnace for reducing ores	C. M. Atkins and A. Govan	103, 409
Furnace for roasting, oxidizing, and chloridizing ores	J. P. Arey	103, 006
Furnace for salt-boiling	W. J. Dodge	105, 786
Furnace for smelting and for other purposes	J. Thomas	100, 566
Furnace for smelting scrap-iron	A. Ott	107, 712
Furnace for steam-engines	G. M. Wyne and W. McGrove	105, 617
Furnace for treating cast iron to convert the same into iron and steel.	W. Fields	103, 437
Furnace, gas, Metallurgic	C. W. Siemens	109, 064
Furnace, Gas-producing	W. Gerhardt	99, 554
Furnace, Glass	J. Henderson	98, 963
Furnace, grate-bar, and grating	J. Cuthbert	102, 233
Furnace, Heating	W. D. Bartlett	101, 082

Garden-tool, Combined	L. and F. Perrott and C. H. Bates	109, 657
Garment, Dummy	A. M. Davis	101, 591
Garment-hanger and size-ticket holder combined	I. Desky and F. A. Jennings	98, 476
Garment-holder	B. Van C. Taylor	109, 156
Garment, Life-preserving	W. Morris	102, 419
Garment-pattern, Adjustable	S. Shawcross	101, 052
Garments, Applying measurement to and laying out	J. J. Miller	105, 355
Garments, Device for measuring and laying out	I. J. Ordway	98, 618
Garments, Fastening for	J. E. Dallon	106, 920
Garments, Hooded	A. Keating	110, 242
Garments, Instrument for draughting	U. L. Leeto	107, 068
Garments, Pattern for measuring and laying out	F. Wetmore	110, 097

Invention or discovery.	Name of patentee.	No.
Garments, Patterns for measuring the body for	M. Palmer, jr., and E. Willoughby	103, 486
Garter	C. E. Coester, jr., and J. L. Mooro	106, 328
Garter	H. A. House	109, 617
Garter	H. A. House	109, 736
Garter	H. A. House	109, 737
Gas and air heating apparatus for metallurgic furnaces	J. W. Ellis	105, 558
Gas and water pipe plug	E. P. Schutt	100, 456
Gas and water stop-cock boxes, Top for	W. W. Pullis	109, 040
Gas-apparatus	J. R. Richard	108, 937
Gas, Apparatus for generating and burning	W. Stewart	105, 012
Gas, Apparatus for lighting and extinguishing	A. N. Allen and R. H. Dewey	101, 806
Gas, Apparatus for lighting by electricity	W. H. Kelly	100, 773
Gas, Apparatus for lighting	W. J. Morris and W. J. Reid	101, 491
Gas, Apparatus for lighting by electricity	W. W. Batchelder	103, 127
Gas, Apparatus for lighting by electricity	W. W. Batchelder	103, 231
Gas, Apparatus for lighting by electricity	H. T. Robbins	107, 105
Gas, Apparatus for lighting and extinguishing by electricity.	F. Bean	108, 434
Gas-apparatus for railroad-cars, &c	J. S. Wood	105, 756
Gas-apparatus for railroad-cars, &c	J. S. Wood	105, 757
Gas-apparatus for railroads	W. Foster, jr., and G. P. Ganster	105, 561
Gas-carbureter	J. L. Bartlett	107, 853
Gas, Clay retort for the manufacture of	F. C. Krauss	110, 249
Gases, Apparatus for generating and burning, in metallurgic furnaces.	J. W. Ellis	105, 557
Gases for fuel, &c., inflamable, Manufacture of	W. Elmer	106, 360
Gas-fittings, Machine for drilling and tapping	R. T. Crane	100, 731
Gas-fixture	D. Milne	107, 194
Gas-fixture, Extension	H. Krüger	101, 369
Gas-fixture, Extension	H. Coester	105, 911
Gas-fixtures, Device for raising and lowering	J. F. Pond	104, 197
Gas-fixtures, Trap-attachment for	J. B. Hyde	107, 264
Gas for head-lights, Apparatus for generating	H. S. Maxim	99, 927
Gas for heating, Apparatus for generating	L. Stevens	108, 302
Gas for illuminating purposes, &c., Manufacture of	J. Kidd	106, 090
Gas from coal, Apparatus for producing	T. O'Meara	108, 863
Gas from hydrocarbons, Apparatus for the manufacture of.	J. H. Smith	109, 242
Gas from hydrocarbons, Generating	J. R. Smedbury	109, 469
Gas from petroleum, Manufacture of	L. Stevens	100, 208
Gas-heater	R. George	108, 583
Gas, illuminating, Apparatus for generating	D. Davidson	99, 860
Gas, illuminating, Apparatus for the manufacture of	J. Dailey	103, 994
Gas, illuminating, Apparatus for the manufacture of	H. G. Ludlow	107, 208
Gas, illuminating, Apparatus for the manufacture of	A. W. Hall	109, 510
Gas, illuminating, Manufacture of	E. P. McCarthy	103, 218
Gas, illuminating, Manufacture of	E. D. McCracken	103, 351
Gas, illuminating, Manufacture of	E. A. and G. H. Pond and M. S. Richardson.	107, 809
Gas, illuminating, Manufacture of	W. Young and P. Braish	107, 848
Gas, illuminating, Method of producing	J. F. Boynton	110, 427
Gaskets for steam-packing, Mode of and device for making.	M. C. Gardner	105, 934
Gas-lighting apparatus, Electric	C. N. Ealer	107, 465
Gas-machine	S. R. Ball	98, 462
Gas-machine	T. G. Springer	100, 684
Gas-machine	W. W. Binny	104, 253
Gas-machine	J. P. Gallagher	105, 190
Gas-machine	J. H. Van Houten	109, 568
Gas-machine, Electro-hydrocarbon	H. J. Smith	101, 171
Gas, Machine for generating and carbureting	H. J. Hoyt	103, 465
Gas-machine, Pneumatic	D. Boyle	103, 836
Gas-meter, Dry	G. Lowen and S. H. Goldthorp	109, 230
Gasometer	T. E. Rowland	100, 550
Gas-pendants, Extensible	G. Warner	106, 895
Gas-purifier, Tray for	P. Munzinger	108, 107
Gas-regulator	P. Keller	98, 778
Gas-regulator	P. Keller	108, 020
Gas-regulator, Automatic	S. O. Trudell	107, 127
Gas-retort	J. Rigby and P. A. Palmer	103, 920
Gas-retort	E. D. McCracken	105, 350
Gas-retort	D. Davison	108, 009
Gas-retort and heating-furnace	G. H. Pond	110, 496
Gas-retort, Setting	T. Curley	103, 570
Gas-tar and ammoniacal liquor, Apparatus for separating.	E. D. McCracken	108, 430
Gas-tube for chandeliers, Extensible	H. L. McAvoy	100, 171
Gas used in heating vulcanizers, &c., Apparatus for automatically regulating the flow of.	J. M. Osgood	105, 971
Gas-works, Center-seal for	P. Munzinger	109, 540
Gas-works, Exhausting-apparatus for	S. R. Brick	101, 348

Paper, Manufacture of	C. B. Hutchins	109, 621
Paper, photographic, Frame for sensitizing	L. V. Moulton	105, 233
Paper, Preparation of straw for the manufacture of	L. Dean	109, 596
Paper, Process and apparatus for the manufacture of	G. E. Marshall	105, 585
Paper-pulp, &c., Disintegrating fibrous material for	A. H. F. Deininger	108, 241
Paper-pulp from wood, Manufacture of	H. B. Meech	106, 710
Paper-pulp, Disintegrating wood for	H. Dodge	99, 071
Paper-pulp, Manufacture of	A. K. Eaton	106, 143
Paper-pulp, Manufacture of	C. B. Sawyer	109, 766
Paper-pulp, Preparing for packing and transportation	W. H. Merrick	105, 354
Paper-ruling machine	W. O. Hickok	104, 152
Paper-stock	M. L. Keen	109, 743
Paper-stock, Apparatus for bleaching	F. Shelden	104, 781
Paper-stock, Manufacture of	M. L. Keen	108, 487
Paper-stock, Preparation of	H. M. Baker	105, 884
Paper-stock, Process of bleaching and pulping	J. W. Goodwin	110, 523
Paper-stock, Reducing and bleaching	H. B. Meech	106, 711
Paper-trimming machine	J. F. Schuyler	109, 767
Parasol	L. Battles	103, 412
Parasols, Mechanism for retaining, adjusting, and sewing.	W. J. Tate	105, 869
Parchment or water-proof paper, Apparatus for preparing.	E. P. Hudson	107, 686
Parchment-paper, Manufacture of	A. J. Sheldon	99, 948
Parchment-paper, rubber-coated, Manufacture of	E. P. Hudson	107, 687
Paraffine and other hydrocarbon oils, Apparatus for burning.	H. H. Doty	109, 303
Paraffine and paraffine oil, Manufacture of	H. W. C. Tweddle	99, 975
Paraffine, Treating and obtaining it in crystals	F. Lambe	102, 135
Parer, Fruit and vegetable	H. Sogga	110, 167
Parlor-croquet, Apparatus for	A. P. Eastman	109, 120
Parlor-fountain for diffusing liquids	W. Altic	100, 349
Passenger-register for vehicles, Automatic	C. Ottinger	106, 610
Pasteboard, Adhesive compound for preparing	G. L. Jaeger	105, 084
Pasteboard, Machine for lining and drying	G. L. Jaeger	102, 942
Paste for bookbinders and others, Material for	I. S. Plumer	106, 617
Paste for polishing metals	P. McManus and G. W. Latimer	103, 909
Paste, Manufacture of	G. G. Noah	104, 190

Sewing-machines, Mechanism for driving	E. Shriver	100, 935
Sewing-machines, Mechanism for operating	E. Shriver	100, 934
Sewing-machines, Mechanism for operating	E. L. Howard	110, 569
Sewing-machines, Mechanism for operating the feeding-wheel in.	F. Spoehr	101, 770
Sewing-machines, Motive-mechanism for	J. W. Jordan	103, 801
sewing-machines, Motive-mechanism of	A. Whittemore	108, 478
Sewing-machines, Motive-power for	E. J. Leyburn	104, 608
Sewing-machines, Motive-power for	T. A. Macaulay	100, 909
Sewing-machines, Needles and their carrying-arms for	C. H. Palmer	109, 753
Sewing-machines, Needles and their carrying-arms for	G. A. Lloyd	110, 480
Sewing-machines, Needle-setter for	J. Karr	110, 144
Sewing-machines, Needle-setters for	J. W. Field	102, 795
Sewing-machines, Preventing reverse-motion in	D. A. Dickinson	103, 584
Sewing-machines, Ruffling-attachment for	H. M. Hall	106, 481
Sewing-machines, Roller for	R. W. Courts	107, 666
Sewing-machines, Scissor-sharpening attachment for	G. T. Chattaway	105, 777
Sewing-machines, Sheet-metal cover for	R. H. Chinn and J. F. Reigart	109, 384
Sewing-machines, Shield for	M. W. Welty	99, 380
Sewing-machines, Shuttle for	W. H. Thayer	103, 797
Sewing-machines, Shuttle for	W. W. Wells	106, 752
Sewing-machines, Shuttle for	A. W. Johnson	109, 414
Sewing-machines, Shuttle for	W. Bennett	109, 574
Sewing-machines, Take-up mechanism for	W. Bennett	110, 424
Sewing-machines, Thread-cutter for	C. J. Wood	106, 596
Sewing-machines, Treadle for	F. Stamler	99, 967
Sewing-machines, Treadle for	A. Neilson	109, 835
Sewing-machines, Treadle for	J. W. W. Gordon	110, 132
Sewing-machines, Tuck-creasing attachment for	J. B. Saffor	105, 852
Sewing-machines, Tuck-creasing attachment for	H. C. Goodrich	106, 151
Sewing-machines, Tuck-creasing attachment for	J. C. Jensen	110, 045
Sewing-machines, Tuck-creasing mechanism for	C. F. Martine	104, 612
Sewing-machine table	M. J. Kerigan	103, 473
Sewing-machine table	C. H. Wilcox	106, 242
Sewing-machine table	J. J. Wheat	108, 074
Sewing-machine table	J. Bennor	110, 335
Sewing-machine table	E. L. Morgan	108, 812
Sewing-machine, Tension-device for	G. L. Dulaney	106, 796
Sewing-machine, Tension-device for thread in	G. L. Dulaney	102, 787
Sewing-machine, Tension-device for thread in	M. C. Hawkins	103, 609
Sewing-machine, Tension-wheel for	J. H. Mooney	103, 643
Sewing-machine, Thread-controller for	W. Wendell	103, 949
Sewing-machine, Thread-cutter for	J. Crowe	104, 561
Sewing-machine, Treadle for	H. J. Case	103, 562
Sewing-machine, Tuck-creasing attachment for	J. F. Kellogg	101, 272
Sewing-machine, Tuck-creasing attachment for	J. J. Sibley	107, 109
Sewing-machine, Tuck-marker for	N. Jones	105, 402
Sewing-machine, Tuck-marker for	J. F. Kellogg	103, 342
Sewing-mechanism	J. L. Young	109, 705
Shade-cord fastener	E. T. Higham	105, 573
Shade-cord retainer	W. H. Bechtel	106, 248
Shade for gas-light	W. Fullagar	103, 865
Shade for lamp and gas-burner	M. H. Collins	108, 972
